Zur Laichplatzwahl von *Rana perezi* in Portugal

RUDOLF MALKMUS

(Schulstr. 4, D-97859 Wiesthal)

On choice of breeding site of *Rana perezi* in Portugal

Breeding sites of *R. perezi* are usually stagnant or slowly flowing waters with submerse vegetation. On the inundation terrace of the lower Rio Beça, a tributary of Rio Tâmega in northern Portugal, spawning places were found in 10–60 cm deep granite rock pools, free of any vegetation.

Key words: Amphibia, Anura, Ranidae, *Rana perezi*, Portugal, breeding site.
